

Psychometric Assessment Battery & PDF Reporting Engine

Complete theoretical framework, item-level computational mechanics, normative calibration models, and multi-page executive PDF report generation architecture.

Domain: Executive Leadership Assessment

Version: 2.4 (Enterprise Edition)

Publication Date: August 2026

?? Document Purpose: This technical specification establishes the end-to-end design of the psychometric assessment platform. It details the multi-trait psychometric battery, item scoring algorithms, Kendall-tau pairwise rank concordance, derailment risk quantification, normative score mappings (STEN, Stanine, Percentiles), and the print-ready PDF reporting engine.

1. Psychometric Battery Architecture & Core Sections

The assessment platform is grounded in contemporary **Industrial-Organizational (I-O) Psychology** and empirical predictive validity literature (*Schmidt & Hunter, 1998; Sackett et al., 2022*). It utilizes a **Multi-Trait Multi-Method (MTMM)** approach combining self-report personality inventories, situational judgment simulations, risk derailers, and timed cognitive aptitude testing.

1?? Personality Assessment (PQ10) ? 28%

Measures 10 executive behavioral competencies on a 5-point Likert scale (1 = Strongly Disagree to 5 = Strongly Agree). Includes direct and reverse-keyed items to detect response acquiescence bias.

2?? Situational Judgment Test (SJT) ? 22%

Simulates complex workplace scenarios where candidates rank 4 distinct response options from Most Effective (Rank 1) to Least Effective (Rank 4). Evaluates contextual judgment and leadership ethics.

3?? Derailers & Drivers ? 20%

Evaluates counter-productive behavioral risks under stress (Hogan-like derailers: micromanagement, arrogance, impulsiveness) balanced against constructive intrinsic motivators (impact, mastery, autonomy).

4?? Cognitive Aptitude Test (GCAT) ? 30%

High-speed mental agility test under a strict 20-minute time constraint. Features 42 items evenly divided across Verbal Reasoning (14), Numerical Analysis (14), and Abstract Logic (14).

2. Competency Framework & Exam Modes

A. The 10 PQ10 Leadership Competencies:

Competency	Psychometric Definition	Effective Behavioral Indicator
Communication	Articulating complex ideas clearly, listening actively, and persuasive rhetoric.	Careful word selection, concise meeting summaries, active listening.
Teamwork	Fostering collaborative environments and resolving interpersonal conflicts.	Supporting peers, collective achievement, cross-functional synergy.
Leadership	Setting a strategic vision, inspiring others, and delegating accountability.	Decisive guidance, fair delegation, building team trust.
Decision Making	Objective data analysis, balancing trade-offs, and timely problem resolution.	Evidence-based choices, accountability for outcomes.
Adaptability	Agility in dynamic environments and navigating ambiguity effectively.	Quick plan adjustments, receptivity to alternative solutions.
Integrity	Adherence to professional ethics, institutional transparency, and fairness.	Data protection, rejecting favoritism, ethical consistency.
Achievement Drive	Setting ambitious quality standards, initiative, and exceeding target KPIs.	Relentless pursuit of goals, continuous workflow optimization.
Resilience	Maintaining cognitive and emotional stability under crises and high pressure.	Composure under duress, supporting team stability in emergencies.
Strategic Thinking	Connecting day-to-day operations to long-range organizational objectives.	Anticipating industry trends, proactive risk mitigation.
Developing Others	Mentoring talent, succession planning, and constructive feedback delivery.	Empowering future leaders, active knowledge transfer.

B. Full Exam Battery vs. Summarized (Quick) Mode Comparison:

Battery Section	Full Exam Battery	Quick / Summarized Mode	Section Weight
1. Personality (PQ10)	140 Items (Comprehensive Profile)	30 Items (Stratified Sample across 10 traits)	28%
2. Situational Judgment (SJT)	16 Multi-Stage Scenarios	8 Representative Scenarios	22%
3. Derailers & Drivers	60 Items (Full Risk Spectrum)	20 Items (Balanced Subscale Sample)	20%
4. Cognitive Aptitude (GCAT)	42 Items (14 Verbal, 14 Numerical, 14 Abstract)	20 Items (7 Verbal, 7 Numerical, 6 Abstract)	30%
Total Scope & Time	258 Questions (~90-120 mins)	78 Questions (~35-45 mins)	100%

3. Mathematical Scoring Engine & Statistical Calibration

Candidate responses are processed through mathematically rigorous scoring algorithms:

1. Likert Absolute Distance Scoring Function (Personality & Derailers):

For each item i with candidate answer $A_i \in \{1..5\}$ and ideal target $T_i \in \{1..5\}$:

ITEM POINTS CALCULATION:

$$\text{Distance}_i = |A_i - T_i| \implies \text{Points}_i = 4 - \text{Distance}_i \text{ (Points in } [0..4])$$

SECTION SCORE PERCENTAGE:

$$\text{Section_Score } (\%) = [\text{Total_Earned_Points} / (\text{Total_Items} * 4)] * 100$$

2. Pairwise Rank Concordance Algorithm (Situational Judgment Test):

For each 4-option scenario, all $\binom{4}{2} = 6$ possible option pairs (i, j) where $i < j$ are evaluated for relative preference direction against the normative expert ranking:

CONCORDANCE CONDITION:

$$\begin{aligned} \text{Concordance}(i, j) &= 1 \text{ IF } \text{sgn}(\text{User_Rank}_i - \text{User_Rank}_j) = \text{sgn}(\text{Ideal_Rank}_i - \text{Ideal_Rank}_j) \\ \text{ELSE } 0 \end{aligned}$$
$$\text{SJT_Score } (\%) = [\text{Sum}(\text{Concordant_Pairs}) / \text{Total_Pairs}] * 100$$

3. Derailer Risk Quantification & Effective Score:

RISK PENALTY & INVERTED DERAILER SCORE:

$$\begin{aligned} \text{Derailer_Risk_Points} &= A_i - 1 \text{ (For counter-productive items where Ideal } T = 1) \\ \text{Risk_Percentage } (\%) &= [\text{Sum}(\text{Risk_Points}) / (\text{Derailer_Items} * 4)] * 100 \\ \text{Effective_Derailer_Score} &= 100 - \text{Risk_Percentage} \end{aligned}$$

4. Composite Weighted Final Score:

$$\text{Composite_Score} = (\text{Personality} * 0.28) + (\text{SJT} * 0.22) + (\text{Effective_Derailers} * 0.20) + (\text{GCAT} * 0.30)$$

5. Normative Score Conversions (STEN, Stanine, Percentile):

- Percentile Mapping:** Calibrated via a logistic transformation curve centered at population mean ($\mu = 75$):

$$\text{Percentile} = \text{round}[100 / (1 + \exp(-(\text{Composite_Score} - 75) / 6))]$$

- STEN Scale (Standard Ten: 1?10):** Mean $\mu = 5.5$, SD $\sigma = 2.0$. Used for executive personality and leadership judgment reporting.
- Stanine Scale (Standard Nine: 1?9):** Mean $\mu = 5.0$, SD $\sigma = 2.0$. Used for cognitive ability benchmarking (Stanine 9 = Top 4% cognitive capacity).

6. Executive Promotion Readiness Bands:

Composite Score	Performance Band	Executive Recommendation
90% ? 100%	?? Excellent	Immediate promotion ready; exceptional strategic and cognitive aptitude.
80% ? 89%	? Strong	High probability of leadership success; well-rounded competency profile.
70% ? 79%	?? Acceptable	Meets core benchmarks; targeted coaching recommended in specific traits.
50% ? 69%	?? Foundational Advanced	Comprehensive development program required prior to promotion consideration.
< 50%	? Foundational	Significant developmental gaps across cognitive or behavioral dimensions.

4. Executive PDF Report Generation Engine

The PDF reporting subsystem is engineered to transform raw assessment data into a formal, print-ready 5-page executive dossier:

EXECUTIVE PDF DOSSIER STRUCTURE				
Page 1	Page 2	Page 3	Pages 4 & 5	
Cover & Executive Brief	PQ10 Radar Chart & Trait Analysis	SJT Decision & Ethics Profile	Derailers Heatmap, GCAT & Individual IDP	

?? Page 1: Executive Brief & Score Overview

- ? Institutional header with session metadata & cryptographic ID.
- ? Hero scorecard displaying Composite Score (0-100%).
- ? National Percentile Rank & Promotion Readiness Band badge.
- ? 4-Battery breakdown table with validity & response consistency check.

?? Page 2: PQ10 Leadership Competency Radar

- ? High-resolution Vector SVG 10-axis radar chart.
- ? Comprehensive trait scoring table with STEN scores (1-10).
- ? Automated competitive strengths identification (Top 3 traits).
- ? Targeted growth areas and behavioral optimization opportunities.

?? Page 3: Situational Judgment & Decision Style

- ? Conflict resolution & crisis management efficacy metrics.
- ? Dominant leadership decision style (Democratic, Directive, Transformational).
- ? Policy alignment & stakeholder management concordance analysis.
- ? Pairwise scenario consistency rating.

?? Pages 4 & 5: Derailers, GCAT & Leadership IDP

- ? 3-tier Derailment Risk Heatmap (Green / Yellow / Critical Red).
- ? Cognitive speed vs. accuracy diagnostic across Verbal, Numerical, Abstract.
- ? Individual Development Plan (Start / Stop / Continue framework).
- ? Official evaluation committee sign-off and signature blocks.

Technical Engine Requirements for Web Platform PDF Generation:

- Zero-Pixelation Vector SVGs:** Radar charts, progression bars, and heatmaps rendered via raw vector SVG nodes to guarantee pristine print clarity at 300+ DPI.
- Strict CSS Paged Media Rules:** Strict page break management (``page-break-inside: avoid;``, ``break-after: page;``) eliminating fragmented tables or displaced headings.
- Cryptographic Verification Hash:** Dynamic SHA-256 session signature embedded in the footer to guarantee report authenticity and tamper resistance.
- Headless Browser Conversion Pipeline:** Server-side conversion using headless rendering engines ensuring 100% visual parity across all operating systems.
